ITM HOSPITALITY FUND SUCCESS STORIES

In accordance with the HIPAA Act, names of individuals connected to the case cannot be disclosed.

- A 28-year old father of three with inoperable brain cancer, was placed in a hospice in Manhattan. His wife, their kids and aunt and uncle require lodging to share his last days with him.
- An 11-year old from Maryland with a diseased intestine required a large intestinal transplant at Mt. Sinai Medical Center. Her mother and father remained with her for the duration of the procedure.
- A 25-year old man, recently married, underwent radical surgery for a cancerous tumor on his spine. His parents and two sisters traveled from Upstate NY to be with him.
- The family of a 10-year old boy from the Midwest, diagnosed with an inoperable brain tumor, discovered that NYU's Hassenfeld Children's Center is the only US medical facility where an experimental protocol exists for his condition. The boy's treatment, supervised by the leading children's oncologist, required a living facility for himself, his parents, brother and sister.
- An elderly man from the Jersey Shore, 120 miles from Manhattan, underwent a mitra/aortic valve replacement operation by a special team at NYU. He wanted his 76-year old wife by his side.
- A seven-year old boy, a facial burn victim from Indiana, traveled with his parents to New York City for burn surgery at Mt. Sinai.
- A 38-year old single mother of two young children with severe metastasis breast cancer requires a specialized protocol of experimental chemotherapy. The debilitating treatment makes it difficult for her to travel each day to and from her home in eastern Long Island.
- The parents of an eight-month old baby boy residing in Albany, New York, receive an urgent call that a kidney is available for their son. They immediately travel to New York City to a pediatric neo-natal transplant center. The parents and grandparents require hotel accommodations.
